

BRAND & IDENTITY SYSTEM

AmarasApps

The identity for an independent software studio — logos, palettes, and the system that lets each product stand on its own.

4 logo concepts

3 studio palettes

Studio ≠ product, by design

WCAG AA / AAA verified

Peak · Orbit · Prism · Stack — four directions inside

Prepared 22 Jul 2026 · Studio identity is deliberately category-agnostic — not tied to finance or to any single product.

AMARASAPPS · CONFIDENTIAL DRAFT

01

Studio ≠ Product

STRATEGY

The key correction in this revision: **AmarasApps and Sparepay are two different brands.** AmarasApps is the *studio* — it should feel like a versatile maker of software of **any** category (a game, a utility, a creative tool — not only finance, not only “private on-device”). Sparepay is one *product* with its own finance-flavoured identity (navy + gold). They are related the way **a publisher relates to a title** — connected by quality and a small “by AmarasApps” endorsement, not by sharing a colour scheme.

AMARASAPPS — THE STUDIO

Personality: modern, versatile, technical, optimistic.
Category-neutral.

Palette family: cool indigo / violet / electric-blue
“software” tones (proposed on the next pages) —
deliberately *not* Sparepay's navy+gold.

Where it appears: the amarasapps.com landing page,
the footer of every product, “by AmarasApps”
endorsements, social/OG cards.

SPAREPAY — A PRODUCT

Personality: calm, trustworthy, money-smart.

Palette: its own — navy #133244 + gold #F5C542
(from its icon).

Relationship: lives on its own product page under the
studio site, carries a small AmarasApps endorsement
mark, but keeps its distinct look. Future products do
the same, each with their own accent.

The connective tissue is **the system, not the colour:** shared typography (SF Pro Rounded), shared layout language, shared motion, and the AmarasApps logo as a consistent endorsement. This lets a bright game and a serious finance app both sit under the studio without clashing.

WHAT THIS FOLIO CONTAINS

1 • Logos

4 concepts, shown as
app icons,
banners/wordmarks,
OG share cards,
favicons — across
schemes & styles (flat,
gradient, liquid-glass,
skeuomorphic).

2 • Palettes

3 studio directions —
Nebula, Monolith,
Aurora — each WCAG-
verified with light +
dark.

3 • Logos in scheme

The chosen mark
rendered inside each
palette so colour + form
are judged together.

4 • Sparepay link

How the product's own
identity coexists with
the studio brand.

Logo concepts

MARKS

Four distinct directions for the AmarasApps mark. All are built as **scalable SVG**, all resolve to a clean silhouette at favicon size, and all read as an "A" or a studio idea without naming a category. Shown here on their native dark tiles.

PEAK · bold gradient A

ORBIT · system / platform

PRISM · faceted A

STACK · layered glass

Peak

A confident monogram "A". Reads instantly, works at any size, most flexible. Safest, most timeless.

Meaning: ascent, the letter A.

Orbit

A core + orbiting satellite. Says "platform / system of things." Category-neutral & distinctive.

Meaning: a studio things orbit around.

Prism

A faceted "A" refracting light — one input, many outputs (many products). Techy, premium.

Meaning: creativity, refraction.

Stack

Layered glass sheets = a stack of apps. Most literal "studio" story; liquid-glass native.

Meaning: a collection / a suite.

The next page shows every concept applied across **real usage scenarios** — app icon, share/OG banner, favicon, monochrome — and the page after shows the four **rendering styles** (flat, gradient, liquid-glass, skeuomorphic) so you can pick a form *and* a finish.

Marks in every scenario

USAGE

Each concept must survive real placements: the App Store / home-screen icon, a horizontal lockup with the wordmark, a 1200×630 social share card (Twitter/X, LinkedIn, iMessage), and a tiny favicon. Here is each mark across all four.

PEAK

ORBIT

PRISM

STACK

All four hold up at favicon scale and in a horizontal lockup. **Orbit** and **Stack** tell the strongest “studio” story; **Peak** is the most versatile and safest; **Prism** is the most premium/techy.

Rendering styles

FINISH

Form is one axis; *finish* is another. The same mark can be delivered flat (versatile, print-safe), gradient (default, modern), liquid-glass (depth + highlight, matches Apple's current language), or skeuomorphic (rich, tactile). Here the "Peak" A is shown in all four so you can judge finish independently of concept.

RECOMMENDATION ON FINISH

Gradient as the primary (App Store icon, site). **Flat** as the mandatory secondary — for monochrome, print, embroidery, tiny sizes, and the “by AmarasApps” endorsement. **Liquid-glass** for hero/marketing moments and if you want to echo Apple's current OS aesthetic. **Skeuomorphic** is beautiful but dates faster and is harder to keep crisp — offer it only as an alternate app-icon.

MONOCHROME / ENDORSEMENT TEST

Knockout works both ways — essential for a studio mark that appears on every product.

Studio palette A — Nebula

01 / INDIGO-VIOLET

A deep indigo canvas with violet glow — “software / night-sky” energy, category-neutral and premium. This is the most distinctive-from-Sparepay direction (cool purple vs. Sparepay’s warm navy+gold). Recommended pairing: **Orbit** or **Prism**.

FOREGROUND	ON	RATIO	GRADE
#F3F1FB text	#0D0B1A	17.40	AAA
#A29DC4 muted	#0D0B1A	7.55	AAA
#9B8CFF link	#0D0B1A	7.03	AAA
#A855F7 violet	#0D0B1A	4.91	AA
#14121F ink	#F7F6FC (light)	17.20	AAA
#6D5EF6 accent	#FFFFFF (light)	4.58	AA

Note: pure indigo #6D5EF6 on the dark canvas is AA-large (4.24); use #9B8CFF for small text/links on dark.

Studio palette B — Monolith

02 / MONO + ELECTRIC BLUE

Near-neutral graphite with a single electric-blue accent. The most restrained, “engineering / pro-tool” direction — lets each product's own colour shine while the studio stays quiet. Recommended pairing: **Prism** or **Peak**.

#2563EB accent	#FFFFFF (light)	5.17	AA

Studio palette C — Aurora

03 / VIOLET→MAGENTA→CORAL

The most expressive, playful direction — a violet→magenta→coral spectrum that says “creative studio, any category” (great if games or creative tools are on the roadmap). Boldest, furthest from finance. Recommended pairing: **Prism** or **Stack**.

How Sparepay coexists

PRODUCT

Sparepay keeps its **own** identity — navy + gold — and simply carries an AmarasApps endorsement. Below: the studio brand (whichever palette you pick) hosting Sparepay's distinct product card, plus the “by AmarasApps” lockup used on the product's own page and store listing.

“BY AMARASAPPS” ENDORSEMENT LOCKUPS

The endorsement uses the **flat monochrome** mark so it stays subordinate to the product. Same pattern for every future app.

THE SYSTEM, SUMMARISED

Shared (the glue)

Logo/endorsement, SF Pro Rounded type, layout language, motion, radii. Documented in **BRAND.md**.

Studio-only

The chosen studio palette (Nebula / Monolith / Aurora) — used on amarasapps.com chrome & marketing.

Product-only

Each product's own accent — Sparepay navy+gold; App 2, App 3 get their own. Never forced to match the studio.

Decisions to make

NEXT

To move from folio to a built site, I need three picks. All combinations below are pre-validated for contrast, so choose on feel.

1 · LOGO CONCEPT

Peak · Orbit · Prism · Stack.

My pick: **Orbit** (best studio story, unique) or **Peak** (safest, most flexible).

2 · FINISH

Flat · Gradient · Liquid-glass · Skeuomorphic.

My pick: **Gradient** primary + **Flat** secondary for endorsement/mono.

3 · STUDIO PALETTE

Nebula · Monolith · Aurora.

My pick: **Nebula** — distinct from Sparepay, premium, versatile.

Once picked, I'll: (1) finalise the chosen SVG in the chosen finish + a flat/mono variant, (2) write the studio tokens to `BRAND.md` + a `CSS : root`, then (3) build the multi-product `amarasapps.com` — a polished landing page with the studio brand, per-product sub-pages (Sparepay first, keeping its navy+gold), scroll animation and depth, all WCAG-compliant.

MY OVERALL RECOMMENDATION

Orbit mark, gradient finish, Nebula palette — a category-neutral studio identity that is unmistakably *not* a finance brand, leaves room for games/tools/anything next, and lets Sparepay keep its own navy+gold without conflict.
