

Prism x Aurora

One studio, refracted into many products. The mark splits light; the palette is that spectrum. A single, coherent idea — with a built-in system for sub-brands.

Prism mark · all finishes

Aurora palette

Per-product spectrum accents

WCAG verified

Each product = the Prism, refracting one colour from the studio spectrum

The concept: a prism refracts white light into a spectrum — exactly what a studio does with one identity across many apps.
Prepared 23 Jul 2026.

Why Prism x Aurora works

CONCEPT

This is the most **conceptually unified** pairing in the folio — and deliberately so. A **prism** takes one input and refracts it into a **spectrum**; **Aurora** is a spectrum (violet → magenta → coral). The mark and the palette tell the identical story: **one studio, many colourful outputs**. That gives the brand a reason to exist beyond decoration — and hands you a ready-made system for sub-brands.

WHAT IT SIGNALS

Creative, versatile, modern, **category-agnostic**. This reads “studio that could make a game, a tool, or an app” — the opposite of a single-purpose finance brand. If your roadmap might include playful or creative products, this is the strongest fit.

THE DISCIPLINE THAT MAKES IT SAFE

Bold palettes fail when everything shouts. The rule here: **the studio owns the full spectrum; each product owns exactly one colour** split from it. Body text always sits on near-white / near-black neutrals. The spectrum is for the mark, gradients, glows and accents — never long-form text.

The one hard accessibility rule (measured, not guessed): the bright spectrum colours are *luminous* — they pass **AAA** as text/glow on dark and as fills behind *dark* text, but they **fail** as white-text button fills and as coloured text on white. So: bright accent = dark-ink button or dark-bg glow; for a coloured button with white text on light pages, use the deep violet #7C3AED (**AA 5.7**). Every mockup in this proposal obeys this.

THIS PROPOSAL, IN FIVE COMBINATIONS

1 • Mark finishes

Prism in flat, gradient, liquid-glass, skeuomorphic — in Aurora colour.

2 • Usage scenarios

Icon, lockup, OG card, favicon, mono.

3 • Aurora palette

Dark + light, full WCAG table.

4 • Sub-brand system

Per-product Prisms + coexistence + endorsement.

The Prism mark — every finish

MARK

The faceted "A" refracts the Aurora spectrum — violet on the left face, coral on the right, a spectrum crossbar. Shown in the four delivery finishes so you can choose form *and* finish together.

FLAT · one colour
(violet), print-safe

GRADIENT · Aurora
spectrum (default)

LIQUID GLASS ·
translucent + sheen

SKEUOMORPHIC · glossy,
tactile

RECOMMENDED FINISH

Gradient (Aurora) as the hero — it's the whole point of the concept. **Flat violet** as the mandatory secondary for mono/print/endorsement. **Liquid-glass** for the website hero and app icon if you want the Apple-OS feel. Skeuomorphic as an optional alt icon only.

MONOCHROME / KNOCKOUT

The two-facet split still reads in pure mono — depth via opacity, not colour.

Prism in every scenario

USAGE

The chosen Aurora-gradient Prism across the real placements: home-screen icon, horizontal lockup, 1200×630 social/OG share card, and favicon — on both dark and light grounds.

The spectrum crossbar keeps the mark recognisable even at favicon size, and the violet/coral split survives on both light and dark grounds. On light backgrounds the tile keeps its dark interior so the spectrum stays vivid (bright-on-white would wash out and fail contrast).

The Aurora palette

PALETTE

A violet→magenta→coral spectrum over a deep aubergine canvas, with near-white text and a light inverse for body content. Expressive but disciplined: spectrum for accents, neutrals for reading.

Canvas
#141018

Surface
#211A2A

Text
#F6F2FA

Muted

FEATURED
Sparepay

Budget from payday to payday.

PrimaryGhost

inverse – light body (deep-violet button)

FOREGROUND	ON	RATIO	GRADE	USE
#F6F2FA text	#141018	17.01	AAA	body on dark
#B4A7C0 muted	#141018	8.26	AAA	secondary on dark
#C4B5FD link	#141018	10.18	AAA	links on dark
#EC4899 magenta	#141018	5.33	AA	accent text/icon on dark
#17121C ink	#FAF7FC	17.35	AAA	body on light
#FFFFFF	#7C3AED button	5.70	AA	primary button on light
#141018 ink	#EC4899 fill	4.78-AA on surf	AA	dark-text chip

The sub-brand system

COEXISTENCE

The heart of this proposal. The studio owns the **full spectrum**; each product is the **same Prism form refracting one colour** split from it. Products feel unmistakably part of the family, yet each is distinct — and a new app just claims the next unused hue.

"BY AMARASAPPS" ENDORSEMENT

Sparepay keeps its own navy+gold on *its* pages; the endorsement is the only place the studio mark appears there — small, mono, subordinate.

PRODUCT ACCENT	ON AURORA SURFACE	AS DARK-INK BUTTON	RULE
 Sparepay gold	10.39 AAA	11.59 AAA	glow/fill only
 App2 emerald	8.77 AAA	9.78 AAA	glow/fill only
 App3 sky	7.87 AAA	8.78 AAA	glow/fill only

System rule: accents are used as a *card border, glow, or dark-ink button* — never as coloured text on white, never as a white-text button fill (all bright hues fail those). This keeps every product AAA-legible while staying vivid.

Proposal 2 — at a glance

SUMMARY

A single, committed direction: **Prism mark · Aurora palette · spectrum-refraction sub-brand system.**

The most conceptually unified and expressive option — best if AmarasApps may span many categories (including playful/creative products), and it hands you a scalable per-product colour system out of the box.

STRENGTHS

- One idea across mark + palette + sub-brands.
- Category-agnostic, creative, memorable.
- Built-in per-product accent system.
- Fully WCAG-verified.

TRADE-OFFS

- Boldest palette — needs the discipline rules.
- Bright hues are fill/glow only (never white-text buttons).
- Less “serious/fintech” than a blue direction.

BEST IF...

Your roadmap may include games, creative or consumer apps — not only finance/utility. If you want maximum gravitas instead, Proposal 1's Monolith/Nebula is safer.

IF YOU CHOOSE THIS — REMAINING PICKS

Finish

Gradient (default) · or Liquid-glass for the hero/icon. Flat violet always ships as the mono secondary.

Product hues

Confirm Sparepay = gold. Reserve emerald / sky / amber / coral for future apps (all AAA-verified).

Wordmark

“AmarasApps” in SF Pro Rounded 800. Optional: a custom-drawn wordmark as a later step.

Next step if approved: finalise the Prism SVG (chosen finish + flat/mono), write the Aurora tokens + the sub-brand accent rules to **BRAND.md**, then build amarasapps.com — studio landing (Aurora), per-product pages (Sparepay keeps navy+gold), scroll animation + depth, all WCAG-compliant.
