

How bright is Aurora?

You chose Aurora, and you want it to feel **modern & trustworthy**. This compares two intensities side-by-side so you can pick the exact temperature.

A · Violet-anchored

B · Full spectrum

Same mark, same layout, same content — only the colour temperature changes. Prepared 23 Jul 2026.

"Modern & trustworthy" — with Aurora

THE BRIEF

Aurora is the expressive palette, and "trustworthy" is the one quality bright spectrums don't shout by default. The good news: colourful brands *can* be deeply trusted (Stripe, Figma, Raycast) — they earn it through **disciplined application**, not by going grey. The lever is **how much of the spectrum you actually show, and which hue leads**.

WHAT MAKES IT TRUSTWORTHY

- Colour is **seasoning, not the meal** — text always on neutrals.
- A **grounded lead hue** (deep violet) rather than hot pink.
- Deep **aubergine canvas** → "aurora at night", sophisticated not candy.
- Mature layout, generous space, restrained motion.

WHAT MAKES IT MODERN

- Spectrum gradient in the mark + one hero moment.
- Current, premium feel (violet is the "tech-premium" hue of the moment).
- Distinct from every blue B2B SaaS brand.
- A built-in, colourful sub-brand system.

Both options below are **fully WCAG-verified**. The only difference is *temperature*: how much magenta/coral you let in, and whether the primary button is grounded violet or vivid. Judge on feel.

Side by side — the studio hero

A VS B

The same landing hero rendered both ways. Left leads with grounded deep-violet; right runs the full violet→magenta→coral spectrum.

Notice: A feels like a *premium studio you'd trust with your money*; B feels like a *creative studio that makes lots of things*. Both are legitimate — A skews trust, B skews expressive.

Light pages, buttons & palette

A VS B

Most of a site's reading happens on light pages (product detail, privacy, FAQ). Here's how each temperature behaves there, plus the button system and the working switches.

FEATURED

Sparepay
Budget from payday to payday.

Primary

Ghost

B · light page — spectrum gradients & accents

A · Violet-anchored swatches

Lead: deep violet. Magenta/coral appear only inside the logo & occasional gradient — never as UI colour. Calmest, most credible.

B · Full-spectrum swatches

Full violet→magenta→coral in gradients, borders & accents. Most vivid & distinctive; needs the discipline rules to stay credible.

CONTRAST CHECK	A PRIMARY BTN	B PRIMARY BTN	BODY TEXT (BOTH)
white on fill	#6D28D9 → 7.1 AAA	#7C3AED→#DB2777 → 5.7/4.6 AA	#F6F2FA on #141018 → 17.0 AAA

My recommendation

PICK

You said **modern & trustworthy**, and you chose Aurora. Those two facts point clearly at one answer.

A · Violet-anchored Aurora

Keep Aurora's identity — the spectrum lives in the **mark, the sub-brand hues, and one hero gradient** — but run the **UI on grounded deep violet**. This is the “aurora at night” read: modern and distinctive because it's violet not blue, trustworthy because it's disciplined and grounded, not candy-bright. It also makes the per-product accent colours (Sparepay gold, etc.) pop harder, because the studio chrome stays calm.

CHOOSE A (VIOLET-ANCHORED) IF...

You want people to trust the studio with serious products (finance, data), you like Aurora's look but want it to feel premium/mature, and you want products' own colours to stand out.

CHOOSE B (FULL SPECTRUM) IF...

You want maximum expressiveness and memorability, expect playful/consumer/creative products, and “distinctive” matters more to you than “sober”.

My pick for your brief: **A — Violet-anchored Aurora**. It's the only version that satisfies *both* your words. We keep the beautiful spectrum where it earns attention (logo, sub-brands, hero) and stay grounded everywhere trust is built (buttons, text, layout). Full spectrum is always available later for a campaign or a playful product.

If you approve A, the next decisions get fast: **logo finish** (gradient vs liquid-glass Prism), **confirm product hues** (Sparepay = gold), and **wordmark** (SF Pro Rounded vs custom). Then we build the site.
